

# Schluter®-KERDI-DRAIN-F

## Floor drain with narrow bonding flange and integrated KERDI collar

Unexpected water from leaks or flooding can cause extensive damage to floors and spaces below. Protect floors and moisture-sensitive building materials by installing a drain in areas at risk of water exposure.

Schluter®-KERDI-DRAIN-F is specifically designed for use in tiled floors in conjunction with Schluter®-DITRA and DITRA-HEAT membranes to provide reliable drainage. The integrated KERDI collar ensures a simple and secure connection to the surrounding membrane.

Thanks to its narrow bonding flange, KERDI-DRAIN-F is also the perfect solution for installations where the drain is located tight against walls or in corners.

Best of all, select from a wide range of grate designs and finishes to complement your décor.

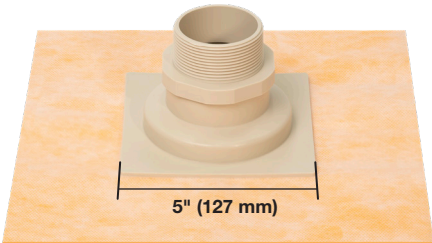

Features:

Integrated KERDI collar

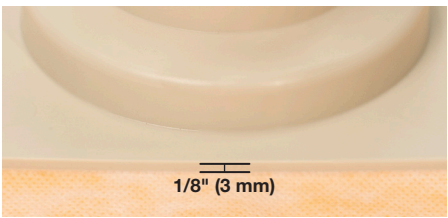

Provides a secure, waterproof connection

Flat, narrow bonding flange

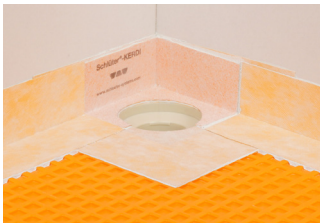

Allows for placement against walls and in corners

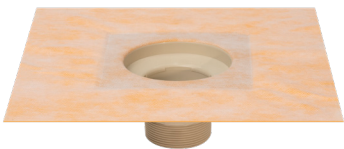

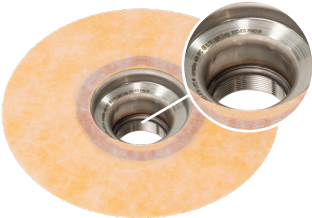

Flange matches up perfectly with the DITRA membrane

Can also be easily installed with DITRA-XL, DITRA-HEAT and DITRA-HEAT-DUO

Available options:

Schluter®-KERDI-DRAIN-F Floor Drain			
Material	Polypropylene	Stainless Steel	
Outlet	2" (50 mm) outlet	2" (50 mm) no-hub outlet	2" (50 mm) threaded outlet
